PROFESSIONAL SUMMARY

Cybersecurity Analyst with hands-on SOC experience across threat detection, alert triage, incident response, and vulnerability management in cloud and hybrid environments. Skilled in SIEM detection engineering, endpoint and edge monitoring with CrowdStrike Falcon and Cloudflare, and log correlation across AWS CloudTrail, CloudWatch, and Kubernetes workloads. Experienced in running incident response from triage through post-incident review, tuning detections to cut noise, and reporting security posture and threat trends to leadership. Working knowledge of ISO 27001, NIST CSF, PCI DSS, and SOC 2.

CORE COMPETENCIES

SOC Operations & Monitoring: Alert triage, threat monitoring, SIEM tuning (FortiSIEM), multi-source event correlation, IOC analysis.

Detection Engineering: Detection use-case design, false-positive reduction, alert-quality optimization.

Incident Response: IR playbook development, triage, investigation, containment, post-incident review, tabletop exercises.

Vulnerability Management: Vulnerability scanning and triage (Nessus, OpenVAS), remediation SLA tracking, penetration testing (Burp Suite, OWASP ZAP).

Cloud & Endpoint Security: AWS CloudTrail, AWS CloudWatch, Kubernetes and container workloads, Cloudflare, CrowdStrike Falcon.

Network Security: Firewalls, IDS/IPS, VPNs, Wireshark, Nmap.

Security Engineering & DevSecOps: Secure SDLC integration, CI/CD security gates, SAST, dependency scanning, secrets detection (Aikido)

Developer Enablement: Secure coding standards, security documentation and playbooks, engineering-facing security support.

Governance, Risk & Compliance: ISO 27001, NIST CSF, PCI DSS, SOC 2.

Reporting & Threat Analysis: Executive and weekly incident reporting, quarterly threat-trend analysis, security metrics (detection coverage, alert quality, response timelines).

PROFESSIONAL EXPERIENCE

SOC Analyst : Aug 2025 – Present

Serianu Limited — Cashia, Kenya (Full-time).

- Monitor and triage security alerts across cloud, container, and SaaS environments using CrowdStrike Falcon and Cloudflare, correlating multi-source events to identify and escalate indicators of compromise.
- Develop and tune SIEM detection rules in FortiSIEM to reduce false positives and improve actionable alert quality across AWS CloudTrail, CloudWatch, Kubernetes, and container workloads.
- Investigate security alerts end-to-end — triage, containment, and post-incident review — using incident response playbooks developed and maintained for the team.
- Define and enforce logging standards across application, infrastructure, and audit environments; monitor logging pipelines for ingestion gaps, outages, and NTP drift to preserve investigative integrity.
- Integrate security tooling — including SAST, dependency scanning, and secrets detection via Aikido — into CI/CD pipelines to support enforcement of security gates in build and deployment workflows.

- Track and report security operations metrics — detection coverage, alert quality, false-positive rate, and incident response timelines — to leadership.
- Operate and optimize security tooling and automation to improve security coverage and reduce manual remediation effort.
- Author weekly incident reports, executive summaries, and quarterly threat trend analyses (Global Current Threat Trends, Trend Analysis, Threat and Incident Analysis) to support strategic decision-making.
- Design and lead tabletop exercises to validate incident response readiness and strengthen cross-team preparedness.
- Support vulnerability scanning, triage, and remediation tracking to maintain SLA compliance across engineering teams.
- Contribute to identity and access control reviews supporting Zero Trust and access-governance initiatives.
- Collaborate with engineering and infrastructure teams to coordinate incident response and drive continuous security improvements.

Cyber Security Analyst & IT Support : Jan 2020 – Jul 2025

Vintax Consultants — Kenya (Part-time).

- Conducted vulnerability assessments and penetration tests (Metasploit, Burp Suite, OWASP ZAP) to identify and report weaknesses across enterprise networks and applications.
- Investigated and resolved hardware and network issues through proactive troubleshooting, minimizing downtime for end users.
- Managed backup and recovery processes to safeguard data availability and business continuity.
- Delivered cybersecurity awareness training and technical guidance to colleagues and stakeholders.
- Provisioned system access and configured onboarding for new employees; delivered Tier 1 desk-side IT support.

CERTIFICATIONS

- Security Analyst — Cyber Shujaa, USIU-Africa (May 2023 – Aug 2023).
- Microsoft ADC Cybersecurity Skilling Program — Security Operations Analyst, USIU-Africa (May 2024 – Aug 2024).

EDUCATION

B.Sc. Information Technology — KCA University (Sep 2019 – Nov 2023).

ADDITIONAL SKILLS

Data analysis and reporting (Excel, PowerPoint, Word, Google Sheets/Docs); network infrastructure setup (Ethernet cabling, RJ45 termination); network analysis (Wireshark, Nmap, iMaster, NagVis); OSINT and reconnaissance.
